### China moves to standardise AI industry

China recently issued the “Guidelines for the Construction of a Comprehensive Standardisation System for the Artificial Intelligence Industry”. The aim is to ensure that, by 2026, alignment between standards and technological innovation will be continually enhanced. Under the guidelines, more than 50 new national and industry standards will be formulated, leading to the accelerated formation of a standardised system that can ensure the high-quality development of the nation’s AI industry.
